

CHI WON (C.W.) LEE JOINS STAFF

Chi Won (C.W.) Lee

C.W. is our latest addition to the floriculture staff at CSU. Coming to us from the University of Arizona, C.W. received his B.S. degree from Kon-Kuk University in Korea, and his M.S. and Ph.D. degrees in plant breeding and genetics from Purdue at Lafayette, Indiana.

C.W.'s primary job is the state's extension specialist to the industry, particularly Adams County. He will also be doing research and teaching at CSU, with his main office in Fort Collins. His phone number is 491-7119. Dr. Lee's main work in Arizona was with genetics and breeding of new crops, tissue culture and temperature effects on propagation. He also taught floriculture and greenhouse management. We are glad to have C.W. on board since this will improve the research group's liaison with the Colorado industry, especially after the hiatus of the past few months. We think the growers will find a real difference, that will be to everybody's benefit, in C.W.'s approach to his work and responsibilities. While C.W. lists several hobbies, we think his main joy is his work. The rest of us will have to look sharp.
